Charter Establishes Four New Organizations at Marshall

Center Director Dr. Wayne Littles has announced a new charter for Marshall which establishes four new Center organizations. They are the Space Transportation Programs Office, the Microgravity Research Program Office, the Flight Projects Office and the Global Hydrology Research Office. The realignment will greatly enhance the Center's capability to manage its lead center assignments for Space Transportation and Microgravity Research, said Littles, and as a Center of Excellence in Propulsion.

**Employee Health and Fitness Week
NASA vs. Army Tug-O-War,
5 p.m. Thurs. at Bldg. 4752**

**"Living and Working in Space" to Air
At 7 p.m. and 10:30 p.m. CDT
Thurs. on Sci-Fi Channel**

Nonskid Road Surface Applied in Mobile Tunnel

A nonskid surface was successfully applied to a test section of road in the Mobile Bankhead Tunnel Wednesday night using a new spray process. Developed by Marshall and USBI Co. of Huntsville, the environmentally-friendly process utilizes technology originally developed to apply a heat-resistant coating to the Space Shuttle's twin Solid Rocket Boosters. This test could lead to shorter road resurfacing time and reduced resurfacing costs.
